DESCONTO)

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's resources.

One of the ways to deal with this problem is to increase the efficiency of our food production. This can be done by using better farming techniques and by using more resources wisely.

Another way to deal with this problem is to reduce the amount of food that is wasted. This can be done by using food more wisely and by reducing the amount of food that is thrown away.

There are many other ways to deal with this problem, but the most important thing is to start now. We need to take action now to make sure that we have enough food and resources for the future.

One of the ways to do this is to use better farming techniques. This can be done by using more resources wisely and by using better farming techniques.

Another way to do this is to reduce the amount of food that is wasted. This can be done by using food more wisely and by reducing the amount of food that is thrown away.
